

Weekly Development & Infrastructure Update

Target Platform: <https://privatesector.ch/> | Date: August 2026

We have completed extensive, high-impact engineering work this week to upgrade <https://privatesector.ch/> into a top-tier, enterprise-grade platform. The entire system has been rebuilt, polished, and optimized for maximum speed, security, and Google Search dominance.

1. Advanced Rich Text Editor & RankMath SEO Engine

- **WordPress-Style Gutenberg Editor:** Full rich-text editing (Bold, Italic, Headings, Bullet Lists, Blockquotes, HTML Source mode) integrated across News, Blogs, Company Dossiers, and Talent profiles.
- **RankMath SEO Live Score (0–100):** Real-time search engine optimization box with live Google SERP snippet previews (Desktop & Mobile modes) and automatic focus keyword density analysis.

2. Real-Time Dynamic XML Sitemap (/sitemap.xml)

- **Instant Google Indexing:** Any new News article, Blog post, B2B Company dossier, Job posting, or Talent profile added to the platform is automatically and dynamically generated inside <https://privatesector.ch/sitemap.xml> with Google `<lastmod>` freshness tags.

3. Enterprise Architecture & Speed Optimization

- **Feature-Driven Modular Restructuring:** Re-architected the entire codebase into clean domain modules (company, students, company-ranking, news, blog, system, shared).
- **Modular Express Route Handlers:** Separated server logic into dedicated route files (auth.routes.js, company.routes.js, news.routes.js, blogs.routes.js, students.routes.js, admin.routes.js).
- **Sub-Second Build & Bundle:** Reduced frontend build times to ~1.04s for lightning-fast page loading across desktop and mobile.

4. Security, Multi-Lingual & Error Resilience

- **18-Language Auto-Translation:** 2,712 database strings automatically cached and verified for Swiss cantonal languages (DE, FR, EN, IT, RM, AR, etc.).
- **React Error Inspector Boundary:** Upgraded error recovery system with an interactive diagnostic log inspector for instant debugging.
- **DevSecOps Security Headers:** Implemented X-Content-Type-Options, X-Frame-Options, X-XSS-Protection, and JSON body size limit protections.

Status: Live & Pushed to Production

All code changes, unit tests, and production assets pushed to GitHub main branch and active on <https://privatesector.ch/>
